EDUCATION

Master of Science in Electrical and Electronic Engineering

Feb. 2018

Yonsei University, Seoul, South Korea

- Thesis Title: "State Estimation using Sampled-data Fuzzy Observer and its Application to AHRS"
- BK21 (Brain Korea 21) Plus Scholarship, National Research Foundation of Korea (NRF)

Bachelor of Science in Electrical and Electronic Engineering

Feb. 2016

Yonsei University, Seoul, South Korea

- National Science and Engineering Scholarship (awarded by the Government of South Korea)

PROFESSIONAL EXPERIENCE SUMMARY

Senior Research Engineer with 7+ years of experience in robotics and autonomous driving, specializing in Reinforcement Learning (RL), Transformer-based End-to-End (E2E) planning, and high-reliability decision-making systems. Demonstrated expertise in architecting closed-loop simulation environments, developing advanced LiDAR-based perception and 3D reconstruction systems, and integrating real-vehicle software for production-grade autonomous platforms. Built and managed large-scale autonomous-driving datasets exceeding 1M labeled objects, and designed LiDAR simulation frameworks supporting sensor-technology development, HD mapping, and high-fidelity 3D scanning. Strong theoretical foundation in T-S fuzzy-based robust control, complemented by hands-on experience delivering scalable, safety-critical algorithms and infrastructure across both research and industrial environments.

- **Hyundai Motor Company**, Seoul, South Korea
 - Senior Research Engineer, Autonomous Driving Development Jan. 2025 – Present
 - Research Engineer, Autonomous Driving Development Mar. 2022 – Dec. 2024
- **Korea Institute of Industrial Technology**, Ansan, South Korea
 - Researcher, Robotics R&BD Group Jun. 2018 – Jun. 2021

KEY PROJECTS

Project: Development of a Unified Closed-Loop Simulation Framework for Reinforcement Learning-Based Autonomous Driving

Aug.2025 - Present

- **Architected a high-fidelity closed-loop autonomous-driving simulation stack**—combining 3DGS-based photorealistic environments, rule-driven reward modeling, and World-Model-powered synthetic data generation—to enable reactive, long-tail scenario evaluation and robust Sim-to-Real generalization.
- **Optimized and validated real-world driving policies** by integrating Online/Offline RL paradigms, designing specialized neural layers for transfer, and successfully deploying the resulting agents on physical vehicles, achieving major gains in success rate, safety, and collision avoidance.

Project: Development of End-to-End Autonomous Planning System

Jul. 2024 – Mar. 2026

- Led the **end-to-end driving software development**, embedded deployment, and real-world validation of a Transformer-based **autonomous-driving planner**—building a unified training/inference framework, enabling **first-ever on-vehicle control**, architecting closed-loop evaluation and long-tail robustness analysis with high-fidelity synthetic data, and accelerating iteration through custom real-time visualization and debugging tools used across **diverse real-vehicle tests**.

Project: Development of Lv.3 and Lv.4 Autonomous Driving Perception Systems (HDP & Robo-Services)

Mar. 2022 – Jun. 2024

- Led the software architecture, development, and deployment of the company's **LiDAR perception stack**—establishing the first systematic **sensor-evaluation** framework, benchmarking 10+ vendors, developing core parsing, filtering, fault-detection, clustering, localization, and calibration technologies (including online optical-flow calibration), optimizing embedded performance with **CUDA**, and validating the full system across Lv.3/Lv.4 platforms such as **Genesis G90**, **Kia EV9**, and RoboRide/RoboShuttle/RoboDelivery services.

Project: Development of River Management Technology Using a Drone-Based Platform for River Investigation

Jun. 2019 – Jun. 2021

- Developed a high-fidelity **LiDAR simulation** and analysis framework to derive optimal hardware specifications, validate **dual-wavelength bathymetric sensing performance**, and translate point-cloud-based error modeling into actionable embedded-system requirements for high-accuracy river and subsurface mapping.

Project: Development of a Standardized Open Database and Evaluation System for Intelligent Vehicle Perception

Jun. 2018 – May 2020

- Built **South Korea's first large-scale, high-precision LiDAR dataset** for **autonomous driving**—constructing a million-label 128-channel corpus with automated annotation (90% time reduction), long-tail extreme-condition captures, cm-level HD mapping with custom tooling (LAS converter, point-wise sync, SOR filtering, rolling-shutter correction), and a full-stack calibrated sensor-logging platform.
- Advanced 3D perception fidelity and validation rigor by boosting Z-axis accuracy from 10 cm to 1 cm via global ground-fitting, performing comprehensive multi-sensor calibration, and benchmarking SOTA **deep-learning models** to confirm real-world applicability and robustness of the dataset.

Project: Development of a 3D Vehicle Shape Generation System for Automated Car Wash

Jan. 2019 – Dec. 2020

- Developed a fast, sub-2 cm-accuracy **3D vehicle-profiling system** for unmanned car-wash automation, integrating custom **multi-LiDAR sensing**, fused point-cloud reconstruction, and **real-time TI-embedded processing** to ensure reliable geometry extraction and collision-free operation.

Project: Development of a Vision-IMU Integrated Indoor Navigation System for the Visually Impaired

Oct. 2016 – Sep. 2017

- Built an indoor localization system for the visually impaired by combining CCTV-based **Machine Learning positioning** with smartphone IMU dead-reckoning, enabling continuous tracking with step counting and heading estimation even when cameras lose sight of the user.
- Designed a full indoor navigation pipeline with a central control server, mobile app, and custom mapping tool, deploying an A*-based safety-aware routing algorithm to deliver real-time, reliable path guidance.

PEER REVIEWER ACTIVITIES

- Journal of Electrical Engineering & Technology (JEET), Impact factor 1.6 | Dec. 2025
- Journal of Korean Institute of Intelligent Systems (KIIS), KCI Impact factor 0.47 | Mar. 2024
- Journal of Institute of Control, Robotics and Systems (ICROS), KCI Impact factor 0.84 | Aug. 2023

CERTIFICATES

- **HDAT DA Lv.2 (Hyundai Data Analytics Test)**, Hyundai Motor Group, 2022
- **Korean History Proficiency Test: Level 1 (Advanced)**, National Institute of Korean History, 2020

HONORS AND AWARDS

- The Best Paper Award from the Autumn Conference, Korea Institute of Intelligent Systems (KIIS) (2016)

TEACHING EXPERIENCE

- Teaching Assistant - Electrical and Electronic Engineering Experiments: Fundamentals, Yonsei University, Spring 2016.
- Teaching Assistant - Data Structure and Algorithms, Yonsei University, Spring 2016.
- Teaching Assistant - Control Engineering, Yonsei University, Fall 2016.
- Technical Instructor, Hyundai Motor Group | 2023 – 2024
- Nov. 2023 – May 2024: Development of Real-time LiDAR-to-Vehicle Calibration and Evaluation Methodologies (Basic Technical Knowledge Transfer for New Employees)
- May 2023 – Oct. 2023: Research and Implementation of LiDAR Calibration Technology (Basic Technical Knowledge Transfer for New Employees)

LANGUAGES

- Intermediate in English: Capable of engaging in normal conversations, presenting ideas, and writing and reading.
- Native in Korean

SOFTWARE SKILLS

- **Programming Languages:** Python, C++, MATLAB
- **Deep Learning & AI Frameworks:** PyTorch, TensorFlow
- **Robotics & Perception Software:** ROS (Robot Operating System), PCL (Point Cloud Library), OpenCV
- **Control & Simulation Software:** MATLAB/Simulink, NVIDIA IsaacSim, Applied Intuition

HARDWARE SKILLS

- **Embedded Computing Platforms:** NVIDIA, Qualcomm, TI (Texas Instruments) series.
- **Autonomous Driving Sensors:** 128-channel LiDAR, 2D/3D Scanning LiDAR, Radar, GNSS/IMU.
- **Vision Systems:** Multi-view Camera, Around-view Camera (AVM).
- **Diagnostic & Measurement Tools:** Pulse Generator, Oscilloscope

PROFESSIONAL AND DEVELOPMENT ACTIVITIES

Professional Conferences Attended

- **The 39th Annual Conference on Neural Information Processing Systems (NeurIPS 2025)**, San Diego, USA, Dec. 2025
- **The 16th Korea Robotics Society Annual Conference (KRoC 2021)**, Pyeongchang, Korea, May 2021
- **KSCE 2020 Convention**, Jeju, Korea, Oct. 2020
- **KIIS Autumn Conference 2020**, Korea, Nov. 2020

- **LASER World of PHOTONICS CHINA 2019**, Shanghai, China, Mar. 2019
- **2018 KSAE Annual Autumn Conference**, Jeongseon, Korea, Nov. 2018
- **The 17th International Conference on Control, Automation and Systems (ICCAS 2017)**, Jeju, Korea, Oct. 2017
- **SICE Annual Conference 2017**, Kanazawa, Japan, Sep. 2017
- **KIEE Summer Conference 2017**, Korea, Jul. 2017
- **The 16th International Conference on Control, Automation and Systems (ICCAS 2016)**, Gyeongju, Korea, Oct. 2016
- **iFuzzy 2016 (International Conference on Fuzzy Theory and Its Applications)**, Taichung, Taiwan, Nov. 2016
- **KIIS Autumn Conference 2016**, Korea, Nov. 2016
- **KIIS Spring Conference 2017**, Korea, Jun. 2017
- **KIIS Spring Conference 2016**, Korea, Jun. 2016

SERVICE / SOCIAL ACTIVITIES

- **Technical Research Personnel (Alternative Military Service)**, Korea Institute of Industrial Technology (KITECH), 2019 – 2021.
